(Approved by AICTE and Affiliated to JNTU, Hyderabad)

MINI PROJECT PRESENTATION
ON

Detecting Spammers and Identifying Fake Users on Social Networks

Under the Guidance of:
DR. NAVEEN KUMAR S
PROFESSIOR

Presented by:

P.Manipriya (23TR1A0589)
P.Rana deepika (23TR1A0596)
MD. Awais khan (23TR1A0591)
K.Abhi ram (23TR1A05B9)

Agenda

- Abstract
- Introduction
- Existing System
- Drawbacks
- Proposed System
- Advantages
- System Architecture
- Modules
- Requirements
- Conclusion

ABSTRACT

SOCIAL MEDIA IS WIDELY USED TODAY MANY FAKE USERS AND SPAMMERS CREATE PROBLEMS THIS PROJECT HELPS TO DETECT FAKE ACCOUNTS USING MACHINE LEARNING IT IMPROVES SECURITY AND USER TRUST

INTRODUCTION

SOCIAL NETWORKS LIKE INSTAGRAM, FACEBOOK ARE WIDELY USED
FAKE USERS SPREAD SPAM, SCAMS, AND MISINFORMATION
DETECTING THEM MANUALLY IS DIFFICULT
SO WE USE MACHINE LEARNING TECHNIQUES

EXISTING SYSTEM

- PLATFORMS USE BASIC RULE-BASED DETECTION
- MANUAL REPORTING BY USERS
- LIMITED AUTOMATION
- CANNOT DETECT ALL FAKE USERS

DRAWBACKS OF EXISTING SYSTEM

- Not accurate
- Time-consuming
- Many fake accounts remain undetected
- High human effort required

Proposed System

- ❑ Use Machine Learning algorithms
- ❑ Analyze user behavior (posts, followers, activity)
- ❑ Automatically detect fake users
- ❑ Classify accounts as real or fake

Advantages of Proposed System

- High accuracy
- Saves time
- Reduces human effort
- Improves security
- Detects fake users faster

System Architecture

User Data → Data Preprocessing → Feature Extraction → ML Model → Output (Real/Fake)

Modules

- Explain parts of your system:
- Data Collection
- Data Preprocessing
- Feature Extraction
- Model Training
- Prediction Module

SYSTEM REQUIREMENTS

Hardware Requirements

- RAM: Minimum 512 MB (1 GB or more recommended)
- Hard Disk: 20 GB or more
- Input Devices: Keyboard and Mouse

Software Requirements

- Programming environment(J2EE based):
- JAVA(JDK),J2EE(JAVA 2 ENTERPRISE EDITION)
- Web technologies: HTML,CSS,Java script
- Server: Apache Tomcat
- Data Base: MY SQL

Conclusion

Fake users are a major problem

Our system detects them efficiently

Machine Learning improves accuracy

Future scope: Improve with Deep Learning
